The present sequence represents a specific example of an anti-gastrin-17 immunogen, comprising the N-terminal 9 amino acids of gastrin-17 conjugated to an immunogenic carrier such as Diphtheria toxoid, by a spacer peptide. This immunogenic composition is used in a new treatment of glycine-extended gastrin-17 (G17-Gly)-dependent gastrointestinal tumours. Anti-G17 immunogens raise antibodies which bind both the amidated and glycine-extended forms of G17. Neutralisation of progastrin G17-Gly prohormone by the antibodies inhibits the growth of tumour cells dependent on progastrin G17-Gly as growth stimulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. The novel method is non-invasive, selectively reversible, does not damage normal tissue, does not require frequent repeated treatments and does not cross the blood brain barrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents an antigastrin-G17 immunogen. The invention relates to a method for treating tumours by immunologically neutralising a tumour growth factor and administering one or more chemotherapeutic agents. The method is useful for treating tumours, especially gastrindependent tumours, including colorectal, stomach, pancreatic and hepatocellular admocarcinomes. The combination of anti-G17 immunisation and chemotherapeutic agents increases the therapeutic effects in controlling or inhibiting colorectal tumour growth over chemotherapy
                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel method for the treatment or preventing hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic carrier. The methods are used to treat hypergastrinemic patients, particularly those with pernicious anemia, those receiving treatment with anti-ulcer agents such as proton pump inhibitors (particularly omeprazole or lansoprazole) or H. 2 receptor blocking agents or antagonists, or those having colorectal disorders or diseases. This sequence represents the human gastrin G17 peptide which is used to illustrate the method of the
                                                                                                                                                                                                    Immunogenic, treatment; hypergastrinemia; gastrin G17; gastrin G34; pernicious anemia; anti-ulcer; proton pump inhibitor; colorectal disease.
                                                                                                                                                                                                                                                                                                                                                                                               Treating or preventing hypergastrinemia comprising administration of, e.g. anti-gastrin antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

(I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunominic peptide is chosen from gastrin G-17 (ADH89201 and ADH89213) gastrin G-34 (ADH89219). ADH89219), gonadotropin releasing hormone (GnRH) peptide (ADH89220 and ADH89224), and human chorionic gonadotropin (hCG) peptide (ADH89220 and ADH89222). (I) comprisiting vaccines directed against hormone or hormone cognate receptors, where the vaccine adirected against hormone-immunomimic peptide such as gastrin G-17 or G-34 is useful for
Cytostatic; Contraceptive; Vaccine; immunomimic peptide; gastrin G-17; gastrin G-34; gonadotropin releasing hormone; GRHH; chorion; gonadotropin; hGG; hormone; gastrointestinal malignancy; thyroid cancer; lung cancer; reproductive system cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            treating gastrointestinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GnRH or hCG immunomimic peptide is useful as contraceptive and for treating cancers in male and female
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Injectable liposomal composition for delivery of a water-soluble substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                The present invention relates to injectable liposomal compositions (I) for delivery of a water-soluble substance e.g. immunomind peptides. (I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunominic peptide is chosen from gastrin G-17 (ADH89201 and ADH89213), gastrin G-34 (ADH89217 ADH89219), gonadotropin releasing hormone (GnRH) peptide (ADH89210 ADH89219), and human chorionic gonadotropin (hGG) peptide (ADH89221 and ADH89221). (I) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one:
Cytostatic; Contraceptive; Vaccine; immunomimic peptide; gastrin G-17; gastrin G-34; gonadotropin releasing hormone; GnRH; chorionic gonadotropin; hCG; hormone; gastrointestinal malignancy; thyroid cancer; lung cancer; reproductive system cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          treating gastrointestinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GnRH or hCG immunomimic peptide is useful as contraceptive and for treating cancers in male and female
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vaccine; development; antibody production; immunogenicity; gastrin;
                                                                                                                                                                                                                                                                                       Injectable liposomal composition for delivery of a water-soluble ubbtsmore e.g. wacchne for preventing pregnancy, comprises several liposomal vestcles comprised a high weight ratio of lipid to encapsulated water-soluble substance.

The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in vaccine development. The invention is useful for the preparation of an antibody, The present sequence is a gastrin peptide. This sequence is an activation of an antibody, The present sequence is a gastrin peptide. This sequence is an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Affinity-binding assay for selecting antigen specific immune cells, by contexting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antidiabetic; gastrin receptor; cholecystokinin receptor; gastrin diabetes; gastrin diabetes; fasting blood glucose; insulin.

```
Antigenic fragments may be attached to an immunogenic carrier and used to traise Abs to a specific aingle form of Gastrin is. 617 or 634. Peptide fragments capable of binding to these Abs are useful in neutralising anti-gastrin Abs in vivo. (Updated on 09-JAN-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; Gastrointestinal-Gen.; Antiulcer; Vaccine; pharmaceutical; hormone; gastrin; heptadecagastrin; ulcer; duodenal ulcer; stomach ulcer;
                                                                                                                                                                                                                                                                                              Immunogens against gastrin peptide (\mathfrak{s}) - used to induce antibodies that specifically neutralise single form of gastrin, G17 or G34.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a pharmaceutical composition (I) comprising a subject in comparison with native gastrin. (I) or Cl is useful for a subject in comparison with native gastrin. (I) or Cl is useful for treating a subject having diabetes, which involves administering Cl or a modified gastrin capable of covabantly reacting with a serum protein, where the frequency of administering the gastrin compound is less than frequency of administering the gastrin. The method further involves measuring a physiological indicator of islet neogenesis, measuring fasting blood glucose (FBG), and decreasing insulin dependency. The modified gastrin comprises a sequence of native gastrin capable of binding to the gastrin/CCK receptor and an amino terminal cysteine or lysine. (I) or Cl is useful for maintaining for an extended period of time an increased gastrin serum level compared with the serum level compared with the serum level administering Cl. (I) Contains gastrin compositions having longer active curvalation than native gastrin peptides, and has a longer half-life in circulation in a subject. This sequence corresponds to amino acide 1-11 of the wild type gastrin-17 peptide used in the invention. (Note: this sequence is not given by the inventors in the generated using information given by the inventors in the Claims section).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                   Pharmaceutical composition useful for treating diabetes, comprises a gastrin compound having an extended activity upon administration to a subject in comparison with native gastrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antigenic peptide fragment selected from the 12 N-terminal AAs of heptadecagastrin (G17).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gastrin, tumours, peptic ulcers, diptheria toxoid, tetanus toxin.

```
Immunogenic compsn. for producing anti-human gastrin 17 antibodies - used for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal ulceration or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAR74295 and AAR74297 are human gastrin 17 (hG17) antigenic peptides, used to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                          Human gastrin 17; antigenic peptide hG17(1-9)-Ser9; immunisation; treatment; gastro-oesophageal reflux disease; gastric; duodenal; ulceration; cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                    The present invention relates to novel pharmaceutical compositions for the human hormone gastrin (G17 and G34) which selectively bind and neutralize gastrin, and a pharmaceutical inert carrier. The hormone gastrin and a pharmaceutical inert carrier. The hormone gastrin has two main functions: stimulation of acid secretion and stimulation of gastrointestinal tract call growth, and axists in two forms: hepteadecagastrin (G17) and tetratriacontegastrin (G34). The compositions are useful for preventing or treating ulcers, e.g. duodenal and gastric ulcers or tumors whose growth is dependent on or stimulated by gastrin hormones. The present sequence is a peptide fragment of human G17 used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunogenic compsn. for producing anti-human gastrin 17 antibodies - used for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal ulceration or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAR74295 and AAR74297 are human gastrin 17 (hG17) antigenic peptides, used to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer
                                  New pharmaceutical composition for passive immunization comprising anti-
human gastrin G34 or anti-hunt gastrin G17 monoclonal antibodies, useful
for preventing or treating ulcers or tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human gastrin 17; antigenic peptide hG17(1-9)-Arg9; immunisation;
treatment; gastro-oesophageal reflux disease; gastric; duodenal;

                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to the treatment of gastroesophageal reflux disease (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient, and administering histamine H 2 antagonist or a proton pump inhibitor. The method provides a more effective method for controlling acid output by the stomach. The therapy is less costly. High gastrin levels associated with standard therapies are neutralized and undesirable side effects are reduced. The method permits a reduced dosage of acid reducing agent both at the acid producing level as well as the caid production stimulating level (gastrin). Reduction of dosages is a caid arable for prolonged treatment of GERD. In a combination therapy with H 2 agonists or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintained by occasional booster shots while gastric acid inhibitor dosing is reduced. Immunization allows a sufficient time for the esophagitis to completely heal and no surgery is required. The present sequence represents a human heptadecagastrin (GI7) immunomimic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The specification describes a method of treating a cancerous or precancerous condition of the lung, oesophagus or liver. The method involves administeraring to a patient an immunogen which induces antibodies in the patient against peptide hormone gastrin 17 (G17) and/or a gastrin receptor, e.g. cholecystokinin (CCK)-B. The method is useful for treating cancerous or pre-cancerous condition of lung, oesophagus or liver, where the condition is cancer, or Barrett's condition. The treatment prevents or delays progression of the Barrett's oesophagus to a cancerous state. The method is also useful for treating the growth of a gastrin-induced tumour or pre-cancerous lesion of the lung, liver or oesophagus. ABP73013-15 represent peptides which induce specific immune responses to G17. The peptides comprise an amino terminal fragment of G17 and a carboxy-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating cancerous or pre-cancerous conditions of the lung, esophagus or liver, by administering an immunogen which induces antibodies in the patient against G17 and/or cholecystokinin-B/gastrin receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gарв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bradykinin; N-benzylglycine; agonist; receptor study; antagonist; achiral; analgesic; angiotensin II; gastrin.
gastrin receptor; cholecystokinin-B; CCK-B; Barrett's condition;
gastrin-induced tumour; immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

The present sequence represents carboxy-amidated gastrin-17. Treatment of gastrin-17-dependent gastrointestinal tumours comprises administering to a mammal an anti-gastrin 17 (G17) immunogenic composition. Anti-G17 immunogens raise antibodies which bind both the amidated and glycine-extended forms of G17. Neutralisation of progastrin G17-G19 prohormone by the antibodies inhibits the growth of tumour cells dependent on progastrin G17-G19 as growth stimulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. This novel method is non-invasive, selectively reversible, does not damage normal tissue, does not require frequent repeated treatments and does not cross the blood brain barrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of inhibitors of Janus kinase/signal transducers and activators of transcription for inhibiting onset and progression of degenerative joint
                                                       Treatment of glycine-extended gastrin-17-dependent gastrointestinal tumours - using anti-G17 immunogenic composition, especially for treatment of colorectal adenocarcinomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Janus kinase 3; JAK3; JAK/STAT inhibitor; peptide substrate; signal transducer and activator of transcription; osteoarthritis; degenerative joint disease; rheumatoid arthritis; leprosy; asthma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human Janus kinase 3 (JAK3) biotinylated peptide substrate GAS1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                          The invention relates to the obtaining of a potent agonist or antagonist peptide by the replacement of selected amino acids with synthetic achiral amino acids. The present sequence represents a gastrin fragment analogue, where at least one of Tyrl2 and Phel7 is intended to be replaced by N-benzylglycine, N-cyclohexylmethylglycine or the ring substituted derivatives thereof
                                                                                                                                                                                                                                                                       New bradykinin analogues contg. N-benzyl-glycine - useful as bradykinin agonists or antagonists, useful e.g. as analgesics.

                                                                                                                                                                                                                                                                                                                                                                                      셤
                                             The sequence represents a synthetic biotinylated peptide substrate for human Janus kinase 3 (JAK3). The invention relates to the use of JAK/STAT (JANUS kinase) stinase 4 (JAK3). The invention relates to the use of JAK/STAT (JANUS) than kinase/stinal transducer and activator of transcription)

inhibitors other than debromohymenialdisine (DH3) and hymenialdisine (H3)

for inhibiting degradation, and for regulating the expression of procincipal activation of activation of activation of activation of activation of the invention is captured in a cell. A JAK3/STAT inhibitor of the invention is caseful for inhibiting progression or likelihood of developing.

Consecutivities or rheumatoid arthritis. The inhibitor is also useful for treating other JAK/STAT-mediated disorders, including T cellocating other JAK/STAT-mediated disorders, type 2 (cytokine hypersensitivity) disorders; B cell lymphoma in myeloid diseases. T cell.—mediated disorders include human T cell leukaemia/lymphoma virus (HTLV)-1. Sdzory's syndrome, c-abl transformation, natural killer-like T cell.—mediated disorders include Leishmaniasis, leprosy, allergy and viral infections; mast cell-mediated disorders include active coll lymphocytic and lympholastic leukaemias and lymphomas and leukaemias and lymphomas and leukaemias cof myeloid origin. DBH and H are useful as therapeutic agents in cancers in whice land lymphomas role in the initiation or progression of

comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptides components to form a cator and region of a second form a peptidase stabilised therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Assay for detecting phosphorylation and dephosphorylation modification of proteins by contacting luminescence peptide with a binding partner and measuring change in luminescence polarization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to detecting addition or removal of a phosphate group to or from a substrate. The method involves contacting a luminescent peptide with a binding partner that binds specifically to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The invention relates to a reagent (I) for incorporation of a phosphorylation site by reaction with a reactive side chain of a compound to be phosphorylated. (I) comparises a structure A-B-C, where A is a moiety that is specifically reactive with a reactive side chain, C is a peptide sequence comprising kinase substrate, and B is a linking moiety competed from any one of the 19 compounds given in the specification e.g. N-gamma-maleimidobutyryloxy-succinamide ester. (I) is useful for phosphorylation, by reacting (I) with a compound to be phosphorylated compounds product using a protein kinase under phosphorylating the resulting product using a protein kinase under phosphorylating conditions comprising 32P-phosphare or 33P-phosphare. The phosphorylated compounds are useful in assays such as drug discovery. The method is suitable for an adjoint the need to carry out recombinant methods to incorporate an amino acid sequence. The method is highly adaptable and can be used to phosphorylate a broad variety of compounds that contain reactive site groups. (I)
                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Reagent for phosphorylating a compound, comprises a moiety that is specifically reactive with reactive site chain of the compound, a linking moiety and a peptide sequence comprising kinase substrate.
                                                                     ů
phosphorylated peptide without regard to the particular amino acid sequence of the peptide. The method is useful for detecting phosphorylation modifications of proteins, including kinases and phosphatases. The methods can be used to study kinase activity of different receptors e.g. the insulin receptor and find agonists and antagonists of these receptors
                                                                                                                                                                                         Gaps

Bequence as can result from known recombinant methods. Introduction of multiple phosphorylation sites in proteins is possible merely by increasing the ratio of reagent to protein, and the method of phosphorylating does not interfere with the protein's function or become products to be obtained that have a higher specific activity that is normally obtained with recombinant methods. The present sequence represents a protein kinase A (FKA) peptide substrate used in examples that demonstrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for immobilizing a functional organic molecule in a predetermined density on a mixed monolayer surface (MMS). The novel method comprises a first monolayer molety (MMJ) having a covalent bond forming reactive group and a second monolayer moiety (MMZ) having an inert group. The method involves contacting MMS with the functional organic molecule to form a covalent bond between the functional organic molecule and MMI to immobilize the functional organic molecule and MMI to immobilize the functional organic molecule in a predetermined density on a mixed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immobilizing functional organic molecule in a predetermined density on a mixed monolayer surface, by contacting the surface with the organic molecule to form a covalent bond and to immobilize the organic molecule.
                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                            ö
        oligopeptides, peptides, polypeptides, oligonucleotides, oligonucleosides, nucleotides, oligonucleosides, nucleotides, oligonucleosides, nucleotides, enzymes enzymes, lighads, raceptors, antibodies, antigens, lipids, and small molecules, but preferably a carbohydrate. The carbohydrate comprises a reducing end, the reducing end comprises a peracetylated sugar having an n-pentenyl group. This sequence represents a peptide which binds to the chemoselective self-assembled monolayer's (SAM's) at the E-terminal, relating to the novel method of the invention.
                                                                                                                                                                                                                                                                                                                                                      bisubstituted pyrazine compounds; Antiallergic; Antiasthmatic; Antilnflammatory; Dermatological; Antirheumatic; Antiarthritic; Amtilnflammatory; Dermatological; Antirheumatic; Antiarthritic; Virucide; Hepatotropic; Anti-HV; Cytostalic; Neuroprotective; JAK-2 tyrosine protein kinase inhibitor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to bisubstituted pyrazine compounds. The compounds potentially modulates protein kinase signal transduction by affecting the anzymatic activity of RTKs, CTKs and/or STKs mediated signal transduction pathways. The present sequence represents biotinylated substrate biotin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New disubstituted pyrazine useful for treating a protein kinase associated disorders e.g. allergic asthma, rheumatic disease, systemic lupus erythematosus and rheumatoid arthritis.
                                                                                                                                                            Gaps

```

```
The invention relates to disubstituted pyrazines of specified formula.

The novel compounds are potent modulators of protein kinases (such as cyrosine kinase and serine/threonine kinase) mediated signal transduction pathways. They are used for treating a protein kinase (such as a receptor tyrosine kinase (e.g. EGP, HER2, HER3, HER4, IR, IGF-IR, IRP, PDGFR-C Tyrosine kinase (e.g. EGP, HER2, HER3, HER4, IR, IGF-IR, IRP, PDGFR-IR, FGFR-1R, FGFR-1R, FGFR-1R, FGFR-1R, FGFR-1R, FGFR-1R, FGFR-1R, FGFR-1R, CSF, Abi, ZAP70, Fes/Fps, Fak, Ack, Yes, Fyn, Lyn, Lck, Blk, CSF, Abi, ZAP70, Fes/Fps, Fak, Ack, Yes, Fyn, Lyn, Lck, Blk, CSF, Tryosine kinase (e.g. Jak, TYK2) and a cyclin-dependant kinase, CDK1 - CDK11) associated disease state e.g. cyclin-dependant kinase, CDK1 - CDK11) associated disease state e.g. cyclin-dependant kinase, CDK1 - CDK11) associated disease state e.g. cyclin-dependant kinase, CDK1 - CDK11) associated disease (e.g. allergic contact contact contact contact contact contact lambated by presentivity pneumonitis); rheumatic disease (e.g. systemic lupus erychematosus, rheumatoid arthritis, juvenile arthritis, chlaratic arthritis, other autoimmune disease (e.g. Type I diabetes, autoimmune thyroid disorders, and Alzheimer's disease), viral disease (e.g. EDR2 - Virus, human papilloma virus), and cancer (e.g. cyclin-dependent lambates, and prostate cancer). The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The present invention relates to injectable liposomal compositions (1) for delivery of a water-soluble substance e.g. immunominic peptides. (1) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high sefficiency of encapsulation. The immunominic peptide is chosen from gastrin G-17 (ADH89206 to ADH89213 and ADH89219), gastrin G-34 (ADH89217-ADH89219), and human chorionic gonadotropin (hGG) peptide (ADH89220 and ADH89222) and ADH89221.

ADH89222 and ADH89225). (1) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccines directed against hormone hormona-immunominic peptide such as gastrin G-17 or G-34 is useful for treating gastrointestinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GRHH or hCG immunominic peptide is useful several such as thyroid and lung cancer; or GRHH or hCG immunominic peptide is useful several such as contraceptive and for treating cancers in male and female Injectable liposomal composition for delivery of a water-soluble substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance. Claim 14; SEQ ID NO 1; 73pp; English.

substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance. Injectable liposomal composition for delivery of a water-soluble

Claim 39; SEQ ID NO 18; 73pp; English.

The present invention relates to injectable liposomal compositions (I) for delivery of a water-soluble substance e.g. immunominic peptides. (I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH8920s to ADH89213 and ADH89221), gastrin G-34 (ADH89217-ADH89219), gonadotropin releasing hormone (GnRH) peptide (ADH89220-ADH89224), and human chorionic gonadotropin (hCG) peptide (ADH89220-ADH89222). (I) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one: treating gastrointestinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GnRH or hCG immunominic peptide is useful as contraceptive and for treating cancers in male and female reproductive systems. The present sequence comprises a G17 peptide linked to a spacer peptide at the C-terminal end.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention realtes to a lipopeptide comprising polypeptide conjugated to lipid moieties, where polypeptide contains amino acid sequence of Thelper cell epitope and B cell epitope, where amino acid sequences are different, and internal lyshe residues or internal lyshe analog residues for covalent attechment of each of lipid moieties through eegr, amino group or terminal side chain group of lyshes or lyshes analog. The peptides are useful in eliciting the production of antibody against an antigenic B cell epitope in a subject, and are useful for antibody production, synthetic vaccine production, diagnostic method employing antibodies and antibody ligands and immunotherapy for veterinary and human medicine. The method efficiently ellcits the production of antibody against antigenic B cell epitope. The present sequence represents a novel immunogenic lipopeptide comprising T helper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel lipopeptide comprising polypeptide having amino acid sequence of helper cell epitope and B cell epitope, conjugated to lipid moieties, useful for eliciting immune response against group A Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gabe

The invention relates to a binding solution (BS), comprising a 1,2-bis(2-aminophenoxy-) ethane-N.N.N.N.V-tertaacetic acid (BAPTA) metal chelating part, or a phosphate-binding compound having a chemical part, linker and metal-chelating part, salt comprising trivalent metal ions and an acid.

The (BS) is useful for binding a phosphorylated target molecule in a sample and isolating phosphorylated target molecule in a sample and solating phosphorylated target molecule in a sample and solating phosphorylated target molecule in a sample and solating phosphorylated target molecule from a sample. The (BS) is also useful in the field of proteomics, molecular biology, high-throughput screening and diagnostics. The (BS) is useful for analysis and controlling phosphorylated target molecules. The (BS) is useful to animal sample for disease. The (BS) is useful for gaining valuable predisposition for disease. The (BS) is useful for gaining valuable information of the effects of various drugs and compounds on the cellular phosphorotein status. The (BS) is useful for gaining valuable comprehens such as signal transductions, mitosis, cell proliferation, etc. The (BS) is useful for generating a comprehensive phosphoprotein correspondent as signal transductions, mitosis, cell proliferation, etc. The (BS) specifically detects, isolates and/or quantitates phosphorylated target molecules. The (BS) allows for rapid, sensitive, and non-cardioactive detection of variety of selected kinases and phosphatases. The (BS) allows for high-throughput screening. The present sequence of a phosphopeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Binding solution useful for binding, detecting and isolating phosphorylated target molecules, comprises metal chelating part or phosphate-binding compound having chemical part, linker and metalchelating part, salt and acid.
                                                                                                 phosphopeptide; binding solution; high-throughput screening; cellular phosphoprotein status; signal transduction; mitosis; cell proliferation; phosphoprotein expression profile.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Martin V;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a collection of capture compounds capable of binding to biomolecules to form complexes that are stable under mass spectrometry conditions. The formulae for the capture compounds comprises sets of compounds of formula (1)-(III) given in the specification. Also included are analysis of biomolecules (by contacting a composition comprising a biomolecule with the above collection and identifying or detecting bound biomolecules), separating protein conformers (by contacting a composition comprising a biomolecule with the above collection, separating the members of the collection and identifying bound proteins), reducing diversity of a complexity mixture of biomolecules (by contacting the mixture with the above collection and separating each set of complexes of capture compounds with biomolecules from the other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sets) and identifying phenotype-specific biomolecules (by sorting cells from a single subject into sets according to a phenotype, contacting mixtures of biomolecules from each set with the above collection and comparing the patterns of biomolecule binding from each set). The collection of capture compounds is useful for the analysis of biomolecules, especially proteins (e.g. analysis of a proteome), using mass spectrometry, especially marks spectrometry, using mass spectrometry. The present sequence is an exemplary peptide ligand which may be incorporated into a capture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Collection of capture compounds capable of binding to biomolecules to form complexes that are stable under mass spectrometry conditions, useful for analysis of biomolecules, especially proteins.
                                                                                                                                                                                                                                                                                                                               matrix assisted laser desorption ionisation-time of flight; MALDI-TOF.

                                                                                                                                                                                                                                                                                                                        The present invention relates to a method for identifying drug non-target blomolecules in a mixture of biomolecules. The method comprises interacting mixture with capture compounds having moiety X which covalently binds to biomolecules with high affinity, moiety Y that increases selectivity of binding so that the capture compound binds to captured biomolecules, and moiety Z for presenting X and Y, and analysing captured biomolecules to identify drug non-targets. The capture compound also optionally comprises a sorting function moiety Q and or a solubility the reactivity function by reducing the number of groups to which the reactivity function moiety & steric hindrance and other interactions. Y is optionally a peptide ligand (ADR42112-ADR42256).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gapa
Identifying drug non-target biomolecules in mixture of biomolecules involves interacting mixture of blomolecules with capture compounds having high binding affinity and analyzing captured biomolecules to identify drug non-targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ..

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a creminal epitope of the gastrin hormone; (c) incubating the sample in the patient and incubating the sample in correct the presence of an N-terminal sequence gastrin peptide under conditions for binding of the gastrin hormone in the sample to the antibody to produce an immobilized complex of the antibody bound to the gastrin hormone; (d) washing the immobilized complex with a detectable marker—conjugated antibody that selectively binds an N-terminal epitope of gastrin peptide, and incubating the complex with a detectable marker—conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable marker—conjugated antibody complex, and incubating with a detectable marker—conjugated antibody complex, and incubating with a carefull marker—conjugated antibody complex, and incubating with a cetectable marker—conjugated antibody complex, and incubating with a cetectable marker—conjugated antibody complex, and incubating with a conclonal antibody and/or the N-terminal selective antibody and the N-terminal selective antibody bind G17 or glycine extended G17 (G17-G1y) and the C-terminal selective antibody bind G17. The method is cusful for detecting and/or quantifying free or total amount of gastric hormone peptides including antibody-bound, in a biological fluid. The present sequence represents the amino acid sequence of mature G17, the present sequence represents the amino acid sequence of mature G17, the present sequence represents in human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.
                                                                                                                                                                Human mature gastrin 17 (G17) amino acid sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a pharmaceutical composition comprising a provides proven factor (KGF) agonist and a gastrin compound that provides beneficial effects relative to each compound alone, and optionally a carrier, excipient, or vehicle. The composition provides usustained beneficial effects, and is in a form that provides normal blood glucose levels in a subject that persist for a prolonged period of time after administration. The composition further comprises amounts of a KGF agonist and a gastrin composition further comprises amounts of a KGF as subject in need, where the amounts are suboptimal relative to the amount of each compound administered alone for treatment of diabetes. The beneficial effects are reduced or absent islet inflammation, decreased disease or condition, and/or are sustained beneficial effects that persist for a prolonged period of time after termination of treatment.
promote and/or enhance soft tissue growth and regeneration, such as in epidermolysis bullosa, chemotherapy induced alopecia, male-pattern baldness, hyaline membrane disease and hepatic cirrhosis. The present sequence represents a little gastrin (gastrin-17) peptide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   KGF; FGF; keratinocyte growth factor; gastrin-17; antilipaemic; antidlabetic; vasotropic; cerebroprotective; cardiant; antiarrhythmic; antibacterial; immunosuppressive; antilnflammatory; gastrointestinal; antiulcer; hypotensive; nootropic; neuroprotective; anorectic; dermatological; endocrine; respiratory; hepatotropic; gene therapy; cell therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New pharmaceutical composition comprising a keratinocyte growth factor (KGF) agonist and a gastrin compound, useful in treating or preventing diabetes, hypertension, heart failure and obesity.

         treatment of a condition or disease, such as dyslipidaemia, hyperglycaemia, severe hypoglycaemia, septicaemia, is troke, left ventricular hyperglycaemia, septicaemia, is troke, left ventricular hyperglycaemia, septicaemia, irritable bowel syndrome, functional dyspepsial dabetes, catabolic changes after surgery, stress induced hyperglycaemia, gastric ulcers, myocardial infarction, impaired glucose tolerance, hypertension, Alzheimer's disease and other central and peripheral neurodegemerative conditions, chronic heart failure, fluid retentive states, metabolic syndrome and related diseases, and disorders and obesity. The composition is also used to promote and or hance soft tissue growth and regeneration, such as in epidermolysis bullosa, chemotherapy induced alopecia, male-pattern baldness, hyaline membrane disease and hepatic cirrhosis. The present sequence represents a little gastrin (gastrin-17) peptide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pharmaceutical composition for treating subject with diabetes, has gastrin compound having extended activity upon administration to subject in comparison with native gastrin.

                                                                                                                                                                                                                                                                                                                                                        셤
```

The invention relates to a novel pharmaceutical composition comprising a

```
ö
gastrin compound having an extended activity, upon administration to a subject, in comparison with native gastrin. The compounds of the invention may be useful for treating a subject having diabetes. This involves measuring a physiological indicator of islet neogenesis and fasting blood glucose (PBG). The method further involves decreasing insulin dependency. Furthermore, the compounds may be useful for maintaining an increase in gastrin serum level for an extended period of time. The current sequence is that of the human gastrin-17 wild-type peptide of the invention which may act as a stimulator of the gastrin or CCK receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pharmaceutical composition for treating subject with diabetes, has gastrin compound having extended activity upon administration to subject in comparison with native gastrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel pharmaceutical composition comprising gastrin compound having an extended activity, upon administration to a

subject, in comparison with native gastrin. The compounds of the involves may be useful for treating a subject having diabetes. This finolves measuring a physiological indicator of islet neogenesis and fasting blood glucose (FBG). The method further involves decreasing insulin dependency. Purthermore, the compounds may be useful for an anticatanting an increase in gastrin serum level for an extended period of time. The current sequence is that of the human gastrin-17 mutant peptide of the invention which may act as a stimulator of the gastrin or CCK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a pharmaceutical composition (I) comprising a gastrin compound (C1) having an extended activity upon administration to a subject in comparison with native gastrin. (I) or C1 is useful for treating a subject having diabetes, which involves administering C1 or a

More the frequency of administrating the gastrin compound is less than frequency of administrating the gastrin. The method further frequency of administration of a native gastrin. The method further involves measuring a physiological indicator of islet neegenesis, measuring a physiological indicator of islet neegenesis, measuring fasting blood glucose (FEG), and decreasing insulin dependency. The modified gastrin comprises a sequence of native gastrin capable of binding to the gastrin/CKK receptor and an amino terminal cysteine or lysine. (I) or Cl is useful for maintaining for an extended period of time an increased gastrin serum level compared with the serum level of a peptide having an amino acid sequence of a native gastrin, which involves administering Cl. (I) Contains gastrin compositions having longer active function than native gastrin peptides, and has a longer half-life in circulation in a subject. This sequence corresponds to the variant gastrin-17(MIAL) peptide used in the invention. (Note: this sequence differs from sequence denoted as SEQ ID NO: 4 as given in the Sequence Listing of the specification).
                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antidiabetic; gastrin receptor; cholecystokinin receptor; gastrin receptor modulator; CCK receptor modulator; gastrin; diabetes; fasting blood glucose; insulin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pharmaceutical composition useful for treating diabetes, comprises a gastrin compound having an extended activity upon administration to a subject in comparison with native gastrin.
                                                                                                                                                                                                                                                                                                                                                      Gaps
modified gastrin capable of covalently reacting with a serum protein,
                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to a pharmaceutical composition (I) comprising a gastrin compound (CI) having an extended activity upon administration to a subject in comparison with native gastrin. (I) or CI is usseful for treating a subject having diabetes, which involves administering CI or a modified gastrin capable of covalently reacting with a serum protein, where the frequency of administering the gastrin. The method further involves measuring a physiological indicator of islet neogenesis.

The modified gastrin comprises a sequence of native gastrin appale of involves measuring fastrin comprises a sequence of native gastrin capable of binding to the gastrin comprise a sequence of native gastrin of a paint of the gastrin serum level compared with the serum level of the an increased gastrin serum level compared with the serum level of a daministering CI. (I) Contains gastrin compositions having longer active contains than native gastrin compositions having longer active contains than native gastrin compositions having longer active gastrin-in than native gastrin compositions having longer active contraint on than native gastrin compositions having the petide used in the invention. (Nose: this sequence differs the form a subject. This sequence corresponds to the wild type the meaning form in a subject of the invention. (Nose: this sequence bisting of the meaning of the

The present invention relates to a method for isolating a phosphorylated target molecule in a sample. The method involves incubating sample and binding solution and separating phosphorylated target molecules from unphosphorylated andlecules from the fish of proteomics, molecules by chromatography. The invention is useful in the field of proteomics, molecular biology, high-throughput screening and diagnostics. The present sequence is the non-phosphopeptide used in
              of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     imidazo[1,2-a]pyrazin-8-ylamine; kinase; Btk kinase; cancer; neoplasm; cytostatic; immunosuppressive; antinflammatory; antipsoriatic; immunosuppressive; antinflammatory; antipsoriatic; antiparententic; antiparententent; antiparententent; antiparkineonian; neuroprotective; nootropic; antidiabetic; antibacterial; antitumor; immune disorder; autoimmune disease; inflammation; psoriasis; chronic myelocytic leukemia; gastrointestinal tumor; lung tumor; breast tumor; ovary tumor; prostate tumor; renal tumor; head and neck tumor; colorectal tumor; parent rejection; atheoreclerosis; Alzheimers disease; diabetes; parkinson's disease; septic shock.
            Isolation of phosphorylated target molecule in sample useful in field e.g. proteomics, involves incubating sample and binding solution, and separating phosphorylated target molecules from unphosphorylated molecules by chromatography.

This invention describes novel imidazol1,2-a)pyrazin-8-ylamine derivatives and their salts, solvates, crystal forms, diastereomers and derivatives and their salts, solvates, crystal forms, diastereomers and derivatives and their also describes 1) a method for identifying a kinase comprising contacting the kinase with a novel limidazol1,2-a)pyrazin-8-ylamine contacting the kinase with a novel limidazol of a kinase and 2) a derivative and detecting modulation of an activity of a kinase and 2) a method for identifying Btk comprising contacting the organism cell or preparation comprising the contacting kinase with a imidazol1,2-a)pyrazin comprision and detecting modulation of an activity of Btk. The derivatives can be used for the treatment of cancer when administered with at least one antitumor therapeutic cancer when administered contacting with at least one antitumor therapeutic gence when administered agent and especially mitomycin C, carboplatin, taxol, cisplatin, cancer agent and especially mitomycin C, carboplatin, taxol, cisplatin, cancer derivatives are useful for manufacture of a medicament for the treatment of kinase (Btk) implicated condition, preferably cancer, an autoimmune of kinase (Btk) implicated condition, in a mammal (preferably whuman, dog or cat). The derivatives are also useful to treat conditions, diseases and/or disorders such as portasis, cancer (especially chronic lung cancer, breast cancer, ovarian cancer, prostate cancer such as hormonal refractory prostate cancer, kidney cancer, head and neck cancer oclorectal cancer) immunoregulation cancer, concert, head and neck cancer oclorectal cancer, the imidazol1,2-celled paralled gencer barears activatives have effective pharmacologically included and amidated peptide which is a substrace for a pTK domain contactinylated and amidated peptide which is a substrace for a PTK domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                           The present invention relates to a ligand-detection reagent, ligand analog and method for determining the presence of a ligand in a sample. The ligand detection reagent comprises of a ligand-binding antibody and a ligand analog to form an antibody-ligand analog complex. The ligand analog is a fluorogenic compound and comprises a monovalent or divalent antibody binding domain and a covalently bonded reporter molecule. The ligand-detection reagent is useful in a competitive immunoassay for the detection and measurement of one or more target ligands in a biological ample. The present sequence is a phosphotyrosine ligand peptide. This peptide is specific for phosphotyrosine-binding antibodies that when conjugated to a reporter molecule forms a ligand analog.
                                                                                                                                                                     Ligand-detection reagent useful for determining presence of target ligand e.g. phosphorylated biomolecule in biological sample comprises ligand-binding antibody and ligand analog to form an antibody-ligand analog
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pharmaceutical; kinase; atopy; hypersensitivity; rheumatism; autoimmune disease; viral infection; cancer; neurodegenerative disease; cardiovascular disease; inflammation; infection; PCR; primer; ss; dermatological; antiallergic; immunosuppressive; antirheumatic; virucide; cytostatic; neuroprotective; cardiovascular-gen.; antiinflammatory; antimicrobial; enzyme inhibition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

ö
pyrazine derivatives are protein tyrosine kinase inhibitors useful to
                                                                                                                                                  The invention relates to pyrazine derivatives and their prodrugs, salts, hydrates, solvates, crystal forms and diastereomers. The pyrazine derivatives are useful for treating tyrosine kinase-associated diseases involving jamus kinase (JAK) 1, JAK2, JAK3 or TYK2 (particularly atopy, cell mediated hypersensitivity, rheumatic diseases, other autoimmue diseases/viral diseases, cancer, neurodegenerative diseases and cardiovascular diseases), in medicaments for treating JAK-associated disease states and for treating diseases and conditions associated with inflammation and infection. This sequence represents a kinase biotinylated substrate peptide used in the scope of the invention.
                       e.g. rheumatic diseases, atopy, other autoimmune diseases/viral ses, cancer, inflammation, neurodegenerative diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunosuppressive; neuroprotective; anticonvulsant; nootropic; antiparkinsonian; cerebroprotective; CNS-gen.; vasotropic; vulnerary; neuroleptic; antidepressant; endocrine-gen.; contraceptive; antiarthritic.

The invention comprises a method of determining etiology of an autistic spectrum disorder in a patient. The method involves determining the level of an infectious agent, toxic chemical, or dietary protein derived antigen, or their antibodies in samples of patient, and comparing antigens/antibodies levels with normal levels of antigens/antibodies from control subjects. The method of the invention is useful for determining the etiology of an autistic spectrum disorder, such as autism, pervasive development disorder and Asperger's syndrome. The present amino acid sequence represents a peptide that was used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to an affinity-binding assay for selecting antigen specific immune calls. The method involves contexting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding
derived antigen in samples of patient, comparing it with normal level of antigens of control subjects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Affinity-binding assay for selecting antigen specific immune cells, by contexting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Meloen RH;

Treatment of glycine-extended gastrin-17 (Gl7-Gly)-dependent gastrointestinal tumours comprises administering an anti-gastrin 17 (anti-Gl7) immunogenic composition. Anti-Gl7 immunogens raise antibodies which bind both the amidated and glycine-extended forms of Gl7. Neutralisation of progastrin Gl7-Gly prohormone by the antibodies inhibits the growth of tumour cells dependent on progastrin Gl7-Gly as growth stimulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. This novel method is non-invasive, selectively reversible, does not damage normal tissue, does not require frequent repeated treatments and does not cross the blood brain barrier
molecules is associated with a first label and a second of the binding molecules is associated with a second label, detecting cells staining with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in accine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin peptide. This sequence is an immunogenic peptide used as a vaccine.

The present invention relates to injectable liposomal compositions (I) for delivery of a water-soluble substance e.g. immunominic peptides. (I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high sefficiency of encapsulation. The immunominic peptide is chosen from gastrin G-17 (ADH89201 and ADH8921), gastrin G-34 (ADH8921) ADH89219, ganadotropin releasing hormone (GnRH) peptide (ADH89220 and ADH89224), and human chorionic gonadotropin (hCG) peptide (ADH89220 and ADH89222). (I) comprising waccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one: hormone-immunomimic peptide such as gastrin G-17 or G-34 is useful for
                                                                                                                                                                                                                                                        Cytostatic; Contraceptive; Vaccine; immunomimic peptide; gastrin G-17; gastrin G-34; gonadotropin releasing hormone; GnRH; chorionic gonadotropin; hGG; hormone; gastrointestinal malignancy; thyroid cancer; lung cancer; reproductive system cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treating gastrointestinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GRRH or hCG immunomimic peptide is useful as contraceptive and for treating cancers in male and female
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a creminal epitope of the gastrin hormone; (c) incubating the sample in the patient under conditions for binding of an N-terminal sequence gastrin peptide under conditions for binding of the gastrin hormone in the sample to the antibody in conditions for binding of the gastrin hormone in the sample to the gastrin hormone; (d) washing the immobilized complex to remove unbound antibody and N-terminal sequence gastrin peptide, and incubating the complex with a detectable marker-conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable marker-conjugated antibody complex, (e) washing the immobilized detectable marker-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a cheet of the total amount of (free) gastrin hormone in the biological fluid sample. The C-terminal selective antibody and/or the N-terminal selective antibody and the N-terminal selective antibody bind G17 or glycine extended G17 (G17-G1y) and the C-terminal selective antibody bind G17. The method is cantibody and the N-terminal selective antibody bind G17. The method is needed to expressents the amino acid sequence of G17-G1y, and the N-terminal selective antibody bind expressed form of gastrin found as a minor component of little incomplete processed form of gastrin found as a minor component of little
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.
                                                                                                                                                                  G17; gastrin; hormone; human; G17-Gly; gastrin 17.
                                                                                                                      Human gastrin 17 (G17)-Gly amino acid sequence.
                                                                                                                                                                                                                                                                                                               /note= "pyroglutamic acid"

The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and second of the binding with each label and selecting cells binding with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in antibody. The present sequence is a gastrin peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Affinity-binding assay for selecting antigen specific immune cells, by contacting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Meloen RH;

The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding molecules is associated with a second label, detecting cells the binding with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in antibody. The present sequence is a gastrin tandem peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Affinity-binding assay for selecting antigen specific immune cells, by contexting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.
                                                                                                                                                                                                                                                                                                                                                                                                                                              Van Der Most RG, Meloen RH;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and second of the binding molecules is associated with a second label, detecting cells staining with each label and selecting cells binding both labels. The invention vaccine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin tandem peptide. This sequence is an immunogenic peptide used as a vaccine.

                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in vaccine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin TDK I peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                                                                                                                                                                                                                                                      Affinity-binding assay for selecting antigen specific immune cells, by contacting cell having four copies of target molecule with two labeled binding melecules, detecting cells staining with each label, selecting cells binding both labels.

The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specifit for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding with each label and selecting cells binding both labels. The invention slop provides a method for detection of early B cell populations in vaccine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin TDK 2 peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                   Affinity-binding assay for selecting antigen specific immune cells, by contacting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.
                                                                                                                                                                                                                                                                                                      Meloen RH;
